EDUCATION

University of California, Berkeley

Bachelor of Science in Electrical Engineering and Computer Sciences

Berkeley, CA

Expected May 2028

EXPERIENCE

Software Engineering Intern

UniShack

June 2026 – Present

Berkeley, CA

- Developed and shipped dorm matching feature using Next.js/React, enabling students to search for roommates and receive live housing updates.

Research Assistant

University of California, San Diego - ACES Lab

June 2023 – June 2026

San Diego, CA

- Developed open-source **Python** package for adaptive hyperparameter tuning in neural networks, reducing per-epoch overhead.
- Designed and executed reproducible **Python/Docker** experiments validated in a 40-participant university study.
- Co-authored pending paper and co-filed patent on dynamic optimization techniques for **machine learning** systems.

Electrical Engineering Intern

ChipMango

July 2026 – August 2026

Remote

- Selected for competitive 100-student semiconductor cohort; gained hands-on experience in transistor-level design, digital logic, and **ASIC/FPGA** verification.

App Developer

Persian Cultural Center

August 2024 – May 2026

San Diego, CA

- Designed, developed, and launched **Swift/SwiftUI** iOS app used by 300+ members; integrated backend services via **SwiftData**, JoinIt, and RESTful APIs.

Course Developer

JuiceMind

June 2024 – May 2025

Remote

- Designed AP Computer Science Principles curriculum and instructional materials using **JavaScript**, reaching over 1,000 students nationwide and internationally.
- Authored 30+ quizzes, 24 coding labs, and 4 capstone projects focused on computational thinking and problem-solving.

Network Intern

Leonardo DRS

January 2024 – May 2024

San Diego, CA

- Implemented low-latency peer-to-peer networking layer on **Linux** using **Python** and **MySQL**, enabling client discovery and real-time state synchronization.
- Built scalable automated registration system supporting up to 50 concurrent users.

PROJECTS

AssistAI | Next.js, Python, PostgreSQL

November 2025 – April 2026

- Developed full-stack **Next.js** platform with AI-powered course planning for transfer students; won Overall Winner at HackCC among 250+ teams.
- Implemented web scraping with **BeautifulSoup** and **ChatGPT API** integration to create intelligent transfer advising system.

Bluehax Discord Bot | Python, PostgreSQL

August 2025 – March 2026

- Built scalable **Discord.py** bot for Nintendo 3DS console management (region unlocking and verification), supporting 1,550+ active global users.
- Designed relational **PostgreSQL** schema for secure user verification and temporary data storage with robust moderation tools.

LEADERSHIP & EXTRACURRICULARS

Vice President & Software Lead, MesaFSD

Full Self-Driving Club

May 2025 – June 2026

Berkeley, CA

- Co-founded collegiate club and led weekly technical meetings for 25+ members focused on autonomous vehicle development.
- Secured \$10,000 in sponsorship funding to design and build a competition self-driving go-kart for the Autonomous Karting Series.
- Led software team developing GPS waypoint navigation, computer vision perception pipelines, and integration with the autonomous stack (Python, OpenCV, ROS).

TECHNICAL SKILLS

Languages: Python, C/C++, Java, JavaScript, TypeScript, Swift, SQL, HTML/CSS

Frameworks: PyTorch, Node.js, Express.js, React, React Native, SwiftUI, SwiftData

Developer Tools: Git, Docker, Linux, Google Cloud Platform, Vercel, Firebase, Supabase, Xcode
